

## Positive Pay Integration

- **Positive Pay** is a strong deterrent against check frauds. With this integration, e-Emphasys enables secure transmission of sensitive payment data to your bank for cross verification. Data such as serial numbers and dollar amounts of checks are referenced to make sure they match at both ends of the payment. The e-Emphasys Positive Pay interface transmits all check issue records to your bank's Positive Pay System, which automatically ensures cross-verification by the bank, before honoring the payment. In event of any discrepancy, the bank holds the check and notifies you for the final decision. It will only fulfill payments from an approved list that you provide.

### KEY FEATURES

- Protects you against altered dollar amounts and other counterfeiting methods.
- Integrates seamlessly with MICR laser check printing software.
- Allows multiple daily transmissions.
- Compatible with virtually all accounting software.
- Relieves accounting staff of the arduous manual reconciliation entries.
- Significantly reduces errors.

### BENEFITS

- Can be configured for seamless integration to meet your bank's Positive Pay specifications.
- Reduce your company's risk of fraudulent activity and secure your assets.
- Generate and process your Positive Pay Files at your convenience.
- No manual entries. Automatically generate a batch of payments after final release of all check-runs is processed in e-Emphasys ERP.
- No more trouble of remembering to submit a payment file! Positive Pay maintains complete history of payment batches, which allows you to regenerate files at any moment.
