

TaaS (Testing as a Service)

Automate ERP updates **faster, safer, and smarter**

Overview

VitalEdge's **Testing-as-a-Service (TaaS)** is a cloud-based, automation-driven testing platform designed to help automate and accelerate release testing.

Organizations operate in a fast-paced environment where ERP changes can have a ripple effect on service, rentals, sales, and financial operations.

Traditional testing methods are slow, resource-intensive, and heavily reliant on internal ERP experts. This can lead to bottlenecks, delayed implementations, and increased risk of operational disruption.

Streamline ERP Updates

TaaS is fully managed by the VitalEdge® team, which means organizations do not have to engage their own resources. Every change is thoroughly vetted before go-live and replaces time-consuming manual testing with intelligent automation, enabling organizations to validate ERP updates quickly, accurately, and repeatedly using their own business data. Plus, test results data stays in the database and becomes useful for audit purposes.

Confidently Adopt New Features With

- **600+ Pre-Built Test Scripts** covering most critical workflows.
- **200+ Business Scenarios** mirroring real operations in parts, service, rentals, sales, and finance.
- **Custom Data Injection** allowing unique dealership data for higher accuracy testing.
- **Communicate precise nature of defects faster** with detailed reporting.
- **Cloud-based Automation** to run test scripts anytime, from anywhere.
- **Repeatable, Scalable Test Cycles** to quickly re-run tests as updates are released.

Gain an Advantage with TaaS

- **25x faster testing** compared to manual methods allowing for shorter ERP update cycles and faster time to value.
- **Upwards of 50% reduction in testing costs** with reduced dependency on technical and functional experts.
- **Enhanced Accuracy** through automation eliminates human errors and improves test coverage across devices and workflows.
- **Increased Productivity** with less downtime and better internal resource prioritization and allocation.
- **Improved Agility** for faster patch and update validation.
- **Reduced Business Disruption** with proactive validation of updates.
- **Seamless Scalability** to easily adjust test scope to fit changing business needs.

Getting Started is Easy!

TaaS is delivered as a cloud-based service, requiring no on-premises setup. With simple integration into your existing VitalEdge ERP environment, your team can begin running automated tests within days.
